---

1. Executive summary

FeeFlow is an MVP SaaS for Company A (Jaipur coaching) that gives parents a clear dues view with pay lin

2. Original business problem

Desktop fee software + Excel due dates + phone chasing. Estimated leakage: late follow-up (~?62.4L never

3. Business impact calculations

From the brief (preserved): 2,600 × ?1.2L = ?31.2Cr billed; 2% uncollected ? ?62.4L; staff chasing ? ?16

4. Product scope

In MVP: fee ledger, parent OTP portal, mock pay + receipt, reminder cancel-on-pay, refund calculator
Roles: Parent, Accounts Executive.
Out of scope: LMS, timetables, admissions CRM.

5. Architecture

React SPA ? Express domain modules ? PostgreSQL (Prisma). In-process cron for mock reminder dispatch. Mo

6. Technology choices

Chosen for typed financial correctness (Decimal), fast MVP UI, Render/Vercel deployability, and strong t

7. Database / ER

26+ relational models including FeePlan, Instalment, Payment, PaymentAllocation, Reminder, RefundPolicy/

8. Authentication & permissions

- Parent: OTP (hashed, expiry, rate limit); JWT with ‘parentId‘; student access via ‘ParentStudent‘ only
- Accounts: email/password (bcrypt) + JWT; dashboard/refund/risk/recon restricted.
- Parent ? accounts endpoints ? 403.

9. Fee & instalment logic

‘netFee = base ? discounts‘. Outstanding from successful allocations only. Instalment sum must equal net

10. Payment lifecycle

Link ? mock checkout session ? gateway result ? signed webhook ? transactional allocation ? receipt (GST

11. Reminder automation

Configurable T?3 / T0 / T+3/+7/+15 (ASSUMPTION A3). HI/EN templates. Respect consent. Partial: amount =

12. Refund calculation & assumptions

ASSUMPTION A1 (labelled in UI):
‘eligibleNetFee × remainingDays / totalDays‘, capped at ‘paid ? alreadyRefunded‘. Versioned policy + imm

13. AI risk scoring

Deterministic weighted score from missed instalments, attendance drop, test decline (ASSUMPTION A7). Cre

14. API architecture

REST under ‘/api/*‘ ? auth, students/ledger, instalments/payment-link, payments (checkout/webhook), refu

15. Security & privacy

16. UI / design decisions

Restrained navy/indigo, IBM Plex Sans + Source Serif 4 for amounts. Accounts: sidebar + tables. Parent:

Figma: MCP unavailable during build ? design system tokens mirrored in CSS (‘frontend/src/index.css‘

17. Testing

Vitest: fee, refund, risk, reminder amount rules (18 passing). API smoke verified: pay ? receipt ? idemp

18. Deployment

Frontend Vercel • Backend + Postgres Render • ‘0.0.0.0:$PORT‘ • see ‘deployment.md‘.

19. Assumptions register

ID	Type	Statement
A1	Business-policy	Illustrative refund formula
A2	Implementation	Eligible net = base ? discounts (? optional non-refundable)
A3	Implementation	Reminder day offsets configurable defaults
A4	Technical	Asia/Kolkata date policy
A5	Implementation	Parent pays specific instalment (not cross-instalment waterfall)
A6	Business-policy	18% GST illustrative on receipts
A7	Technical	Deterministic risk heuristic ? ML
A8	Technical	OTP demo mode
A9	Future/legal	Demo consent ? production DPDP
A10	Data	Brief snapshots preserved alongside live recalculation

20. Intentionally cut

Bulk CSV upload UI, Redis/BullMQ, real SMS/WhatsApp/Razorpay, multi-approver refund workflow, student se

21. Future roadmap

Real gateway + messaging, legally reviewed refund policy pack, verifiable parental consent, trained risk
